**From Ingramcontent : Long Non-coding RNAs in Human Disease (Current Topics in Microbiology and Immunology)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Long

## Non-coding RNAs in Human Disease (Current Topics in Microbiology and Immunology):

This volume focuses on the roles of long non-coding RNAs (lncRNAs) in contexts ranging from human cancers to cardiovascular disease and ageing. The role of lncRNAs in X-inactivation and those lncRNAs derived from pseudogenes, past retroelements integrated within the human genome, as well as the role these pseudogene-derived lncRNAs play in cancer development are discussed in detail. Further, the book examines the function of lncRNAs in diseases such as diabetes, in smooth muscle formation, and in the modulation of nuclear receptors, as well as in connection with perspectives on the development of personalized therapeutics. It offers an appealing and insightful resource for scientists and clinicians alike.

**From the Back Cover** This volume focuses on the roles of long non-coding RNAs (lncRNAs) in contexts ranging from human cancers to cardiovascular disease and ageing. The role of lncRNAs in X-inactivation and those lncRNAs derived from pseudogenes, past retroelements integrated within the human genome, as well as the role these pseudogene-derived lncRNAs play in cancer development are discussed in detail. Further, the book examines the function of lncRNAs in diseases such as diabetes, in smooth muscle formation, and in the modulation of nuclear receptors, as well as in connection with perspectives on the development of personalized therapeutics. It offers an appealing and insightful resource for scientists and clinicians alike.

**About the Author** Kevin Morris is an Associate Professor at the Department of Molecular and Experimental Medicine, The Scripps Research Institute in La Jolla, CA, USA. The responsible series editor is Peter K. Vogt, The Scripps Research Institute in La Jolla, CA, USA.
