Jean-Marie Denoix : The Equine Distal Limb: An Atlas of Clinical Anatomy and Comparative Imaging before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Equine Distal Limb: An Atlas of Clinical Anatomy and Comparative Imaging:

Jean-Marie Denoix is the world's leading equine musculoskeletal system anatomist and has become one of the foremost equine diagnostic ultrasonographers. There is therefore nobody better to compile a reference atlas of the clinical anatomy of the foot, pastern and fetlock, correlated with images obtained by radiography, diagnostic ultrasonography and magnetic resonance imaging. Advanced imaging techniques require in-depth knowledge of

anatomy for accurate interpretation and especially when using magnetic resonance imaging this must be a 3-dimensional concept of anatomy. This book provides a unique contribution and is an invaluable reference text. The image quality is extraordinarily high and the multiple views of each area of the distal limb provide an extremely detailed evaluation. Each part opens with a characteristically superb anatomical drawing by the author. Each spread of pages deals with a single dissection viewed by means of colour photographs, labelled black and white equivalents, plus x-rays, ultrasound and MRI scans as required. The book is designed for maximum clarity using a generous page size. The atlas is essential for anybody involved in detailed anatomical study, complex lameness evaluation or advanced imaging techniques.
