**From Oxford University Press : Wounds: Biology and Management (Oxford Medical Publications)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Wounds: Biology and Management (Oxford Medical Publications):

This book presents a full appraisal of accepted knowledge in wound management, drawing on the expertise of leading specialists in all the fields concerned. It is extensively illustrated, and includes essential, practical advice. Throughout,

the emphasis is on the control of healing, and particularly, the recognition of adverse factors.

This is the best attempt so far to present the current knowledge of the biochemical and cellular events of wound healing, and to relate those events to the practical techniques of treating wounds of different types...contains much valuable information and should do well  
About the Author D. J. Leaper is at North Tees General Hospital, Stockton-on-Tees. K. G. Harding is at University Department of Surgery, Heath Park Cardiff, Wales.
